CompoundIQ POC Demo — Quick Start Guide

> ## ⛔ *ARCHIVED / SUPERSEDED — DO NOT PRESENT FROM THIS DOCUMENT*
>
> ***Use `POC-DEMO-DETAILED.md` v2.12 instead.*** *This Quick Start is from* ***April 2026*** *and has not been maintained. It is retained for history only.*
>
> ***The dangerous item first:***
>
> - 🛑 ***This document tells you to pay with a Stripe test card. Do not. Production runs on LIVE Stripe keys.*** *A test card hard-declines on stage; a real card puts through a* ***real charge with a real Connect payout split****. Every card instruction below has been struck through. In the current demo,* ***no card is ever entered*** *— the checkout page is rendered and narrated, and that's the whole beat. See Part 4B of the Detailed doc.*
>
> ***Other ways this document is now wrong:***
>
> - ***Pricing is stale.*** *It says `$300 retail / $127.50 clinic margin`. Current verified figures are* ***$190.00 retail / $80.75 clinic margin*** *on a $95 wholesale at 2×.*
> - ***"Provider auto-selects" is false.*** *Sunrise has 4 providers as of v2.9 and the provider is a real selection.*
> - ***Favorites/Protocols counts are wrong.*** *It says "Favorites (4+)" and "Protocols (2)". Live:* ***Favorites (10)****,* ***Protocols (3)****.*
> - ***The 5-medication seed is gone.*** *The catalog is* ***77 Ingredients · 57 Salt Forms · 167 Formulations · 1,336 Pharmacy Offerings****.*
> - ***`scripts/get-checkout-url.ts` is obsolete.*** *The checkout URL comes from the in-app* ***Copy Payment Link*** */* ***Copy Bundle Payment Link*** *button in the order drawer. No terminal step.*
> - ***The EPCS claim contradicts the Detailed doc.*** *This document says the 2FA modal triggers from the single-Rx favorites flow and not the batch path. The Detailed doc (authoritative) documents EPCS 2FA on the provider signing flow for DEA-scheduled compounds.*
> - ***The role narration is wrong.*** *This document narrates the MA's workflow while signed in as clinic_admin. In v2.12 the prescribing flow is genuinely run as `ma@sunrise-clinic.com`, and the MA's inability to sign is a headline beat.*
>
> *No further updates will be made to this file.*

Version: 2.1 (ARCHIVED) | **Date:** April 21, 2026 **Duration:** 10–15 minutes **URL:** https://functional-medicine-infrastructure.vercel.app

> ***CI status (as of v2.1):*** *Every merge to main is backed by 65 passing Playwright E2E tests across Chromium / Firefox / WebKit / mobile Chrome, plus 6 jest unit tests covering the HIPAA idle-timeout state machine. E2E blocks merges — no `continue-on-error` escape hatch.*

Before You Start

- Run `npm run seed:poc` (syncs all credentials)

- ~~Stripe test card: `4242 4242 4242 4242` + `12/28` + `123` + `78701`~~ — **REMOVED. Production is on live Stripe keys. No card is entered in this demo.**

Demo Flow (6 Steps)

Step 1 — Show the Clinic App (2 min)

1. Go to `/login` → log in as `admin@sunrise-clinic.com` / the password in `POC_CLINIC_ADMIN_PASSWORD` (set in your local env)
2. Show the **dashboard** — KPI cards, order table, kanban toggle
3. Collapse/expand the **sidebar**

Say: "This is the medical assistant's workspace. All clinic orders at a glance."

> *(Superseded: run this as `ma@sunrise-clinic.com` — see Detailed doc Part 3A.)*

Step 2 — Multi-Prescription Flow (4 min)

1. Click **"+ New Prescription"**
2. Select **Alex Demo** as patient → provider auto-selects → Continue *(superseded: the provider is a real selection from 4 providers)*
3. **Show Quick Actions Panel** — Favorites tab (4+ saved configs) and Protocols tab (2 templates) *(superseded: Favorites (10), Protocols (3))*. Click a favorite like "Semaglutide 0.5mg weekly" for one-click load, OR:
4. Search **Sema** → Select **Semaglutide** → cascading dropdowns: salt form → formulation → dose/frequency/timing
5. **Point out the Structured Sig Builder** — auto-generated sig with unit conversion. Show Titration/Cycling mode toggles.
6. Select **Strive Pharmacy** → quantity → Click **"Continue — Set Retail Price"**
7. Click **2x multiplier** → show margin math (~~$300 retail, $127.50 est. clinic margin~~ → superseded: **$190.00 retail, $80.75 est. clinic margin**). Sig is pre-filled.
8. Click **"Add & Search Another"**
9. Search **Test** → Select **Testosterone** → **Point out DEA Schedule 3 warning** → Cypionate → formulation → dose/frequency → Strive → set price → Click **"Review & Send (2)"**
10. Show **batch review**: DEA schedule badges on controlled substance cards, drug interaction alerts (if applicable), 2 prescription cards, combined totals, single signature pad
11. **Sign** → **"Confirm & Send"** → orders submit and redirect to dashboard

> ***~~EPCS 2FA Tip:~~*** *~~The EPCS 2FA modal (QR code + 6-digit TOTP) triggers from the single-Rx favorites flow with a controlled substance, not the batch path.~~* — ***Contradicts the Detailed doc. Follow POC-DEMO-DETAILED.md v2.12 Part 3H.***

Say: "Cascading dropdowns, structured sig builder, provider favorites, DEA-compliant 2FA. Patient selected first. Two prescriptions. One signature. 45 seconds for a multi-medication visit."

Step 2B — Draft Flow (2 min)

1. Click **"+ New Prescription"** → Select Alex Demo → Continue
2. Search **Sema** → Select pharmacy → 2x multiplier → Enter Sig
3. Click **"Save as Draft — Provider Signs Later"** → redirects to dashboard
4. Show **"Drafts" tab** — the draft order is visible *(note: the Drafts tab is count-conditional and only appears once a draft exists)*

5. **Sign out** → Log in as provider: `dr.chen@sunrise-clinic.com` / the password in `POC_PROVIDER_PASSWORD` (set in your local env)
6. Click **Drafts** tab → Click draft → Click amber **"Review & Sign"** button
7. Review details → **Sign** → Confirm → order moves to "Awaiting Payment"

Say: "The MA saves it. The provider signs it later. Different sessions, different logins. This is how real clinics work."

8. ~~**Get the checkout URL** — In a separate terminal, run `npx dotenv -e .env.local -- npx tsx scripts/get-checkout-url.ts`~~ — **OBSOLETE.** Use the in-app **Copy Payment Link** button in the order drawer (or **Copy Bundle Payment Link** for a bundled pair). No terminal step.

Step 3 — Patient Checkout (2 min)

1. Open the **checkout URL** from Step 2.8 in a new tab
2. Show: **clinic branding**, generic line item ("Prescription Service" — no medication name), ~~$300 total~~ *(superseded: $190.00, or $286.00 for the bundled pair)*
3. ~~Pay with test card: `4242 4242 4242 4242`~~ — 🛑 **DO NOT. Production is on LIVE Stripe keys.** Render the page, narrate it, stop. See Detailed doc Part 4B.
4. ~~Show the **success page**~~ — **Not reachable without a real payment. Describe only.** See Detailed doc Part 4C.

Say: "No login, no app, no account. Tap a link, pay, done. Zero PHI on any screen — Stripe never sees the medication name."

Step 4 — Ops Dashboard (3 min)

1. New tab → log in as `ops@compoundiq-poc.com` / the password in `POC_OPS_PASSWORD` (set in your local env)
2. Show the **dark-mode pipeline** — the order you just created should appear
3. Click into the order → show **Detail, History, Submissions, SLA tabs**
4. Navigate to **SLA** → show breach tracking *(superseded: the page currently reads "0 SLA deadlines — All SLAs are on track or resolved". See Detailed doc Part 5B.)*
5. Navigate to **Adapters** → show pharmacy health monitoring
6. Navigate to **Fax** → show the triage queue
7. Navigate to **Catalog** → show medication management

Say: "Every order across every clinic in one view. SLA enforcement runs automatically every 5 minutes. Circuit breakers protect against pharmacy API failures."

Step 5 — Security Demo (1 min)

1. While logged in as ops, go to `/dashboard`
2. Show **"Access Denied"** — ops can't see the clinic app
3. Log in as clinic admin, go to `/ops/pipeline`
4. Show **"Access Denied"** — clinic can't see ops dashboard

Say: "Row-Level Security at the database level. Not just UI hiding — the data physically cannot cross boundaries."

Step 6 — The Pitch (1 min)

Say:

> "*CompoundIQ replaces phone calls, spreadsheets, and fax machines with an intelligent platform that handles the full prescription lifecycle. The clinic earns margin on every fill. The pharmacy gets structured, error-free orders. The patient gets a seamless checkout via text message. And the 4-tier adapter layer means we meet every pharmacy where they are — API, portal, spec, or fax.*"

Quick Reference

Account	Email	Password
Ops	`ops@compoundiq-poc.com`	`POC_OPS_PASSWORD` (set in your local env)
Clinic Admin	`admin@sunrise-clinic.com`	`POC_CLINIC_ADMIN_PASSWORD` (set in your local env)
Provider	`dr.chen@sunrise-clinic.com`	`POC_PROVIDER_PASSWORD` (set in your local env)
MA	`ma@sunrise-clinic.com`	`POC_MA_PASSWORD` (set in your local env)

Seed Data	
Clinic	Sunrise Functional Medicine *(superseded: 2 clinics — + Blue Cedar Integrative Health)*
Pharmacy	Strive Pharmacy (Tier 4 Fax, TX) *(superseded: 5 pharmacies across all 4 tiers)*
Patient	Alex Demo (TX) *(superseded: 10 patients across 9 states)*
Medications	~~Semaglutide, Tirzepatide, Testosterone, Sermorelin, Naltrexone~~ *(superseded: 77 ingredients · 57 salt forms · 167 formulations · 1,336 pharmacy offerings)*
Payment card	**NONE. Production is on live Stripe keys — no card is entered in this demo.**
